* all previously released in June 24, 2016 NI 43-101 by Hard Rock Consulting, LLC

Selected drill hole results for drilling completed by Ensearch, Full Metal Minerals and Miranda-Alaska Gold Torrent (see Hard Rock Consulting, LLC PFS for Gold Torrent Inc., June 24, 2016).

Ensearch drilled 11 underground core holes totaling 3,159 m (10,364') and 7 surface core holes in the Coleman zone totaling 1,488m (4,881') during the 1984 field season.

From 2005-2009 Full Metals Minerals drilled a total of 34,103 meters (111,887') in 173 core holes from surface along the Coleman-Lucky Shot-War Baby-Murphy trend.

¹ The historical production information presented is based upon reports filed by the prior owners and operators of the mines. The Company has not undertaken any independent work to verify or confirm the previously reported information.

² Based on a 2016 pre-feasibility study by Hard Rock Consulting. A qualified person (as defined by Securities and Exchange Commission rules) has not done sufficient work to classify the estimate as a current estimate of mineral resources, mineral reserves or exploration results. The Company is not treating these estimates as current estimates of mineral resources, mineral reserves or exploration results.
